Experience

Research and Development Engineer Intern - Robokart

Jun 2024 – Jul 2024

- Conducted STEM workshops with hands-on demonstrations using science kits and lab equipment.
- Trained students under the Gujarat Government-supported GUJHOST initiative.
- Facilitated experiments and interactive learning sessions during onsite fieldwork across Gujarat.

Education

BTech in Artificial Intelligence and Machine Learning

Aug 2023 – Present

Dwarkadas J. Sanghvi College of Engineering

CGPA: 7.552 / 10.0

Skills

Programming Languages: C, C++, Java, Python

Web Development: HTML5, CSS3, Tailwind CSS, Streamlit, basic JS

Backend & Databases: MySQL

AI & ML: Supervised and unsupervised learning, Data Cleaning, EDA, Feature Engineering, Model Building & Evaluation

ML/DL Frameworks: Scikit-learn, TensorFlow, Keras, PyTorch

Libraries: NumPy, Pandas, Matplotlib, Seaborn, OpenCV, NLTK, spaCy, TF-IDF

Core CS: Data Structures, Algorithms (Basics), OOP, OS, DBMS

Tools & Platforms: n8n, Git, GitHub, Linux, Postman, Anaconda, VS Code, Jupyter Notebook, Google Colab

Other: Prompt Engineering

Projects

DiabeTwin – AI-Powered Healthcare Digital Twin Platform

- Generative AI-driven healthcare application that simulates future diabetes outcomes (HbA1c, weight) based on lifestyle factors such as diet, physical activity, stress, sleep, and medication adherence using an explainable digital twin model.

Tools: Python, Streamlit, Generative AI (LLM), Rule-based Simulation Models, Pandas, NumPy

AquaScan – Water Pollution Detection System

- Built an AI-powered web application for detecting plastic waste and pollution in water bodies using a YOLO-based object detection model. Implemented image upload and camera-based inputs to identify 15 categories of waste from water body images. Enabled automated report generation with timestamp and location tagging.

Tools: Python, Streamlit, YOLO, OpenCV, Pandas

College Enquiry Chatbot

- Built an NLP-based chatbot to answer college-related FAQs using intent classification. Implemented TF-IDF vectorization with Logistic Regression and SVM classifiers across 6 predefined intents.

Tools: Python, NLTK, scikit-learn, Flask

Co-curricular Activities

- Marketing Co-Committee Member – DJS TEDx
